

Week 12!

What needs done?

- Monday
- ▶ Mission 2B Today (04/06) → Bryson + Will
 - ▶ Start mission 3 code → Evan
 - ▶ Work on Website 3, (due 4/17) → Vicente

Mission 2B

→ Mostly debugging

→ Our sensor doesn't play super nice

↳ fixed array of them?

Why?

2x sensor is not great on Arduino

Single fixed sensor gives bad readings (what we are doing right now)

fixed array could help w/ filtering the bad readings dramatically

Mission 3

→ I need to learn how to call a magnetometer for zeroing over.

→ maybe do some function of left wheel spin time per angle θ ?
